

Automation in demanding content programming.

In this project for DIR gyms we have made the most of the Waapiti platform.

With a combination of multichannel and smart playlist we have been able to help our client to create an automatic system to be able to play both their own content and streaming content that is being carried out in other DIR centres; with the advantage that if at any time and for any reason of third party data connections have problems, the programmed streaming could play a pre-recorded class.
